Classification of Cats According to your Type

March 30, 2025

This classification of cats is designed to be in accordance with your type of thinking. Many people have noticed that cats, like dogs, have their own different personalities and behaviors. That's why we decided to make this classification, so that it would be a little easier for people to understand

what breed and type of cats they are closer, clearer and maybe even more harmonious in their relationship with the animal.

List of cats for different types

Of course, the classification of cats by type may be small yet and have some inaccuracy, because it was created by us on the basis of typological assessment. You can read what typology is here. Cats will be different for typical and atypical people. If the value (atypical) is in brackets next to the cat breed, it means that this cat is recommended for atypical types of people. Similarly, (typical) is for typical people. Who are typical and atypical types – read here. If there is nothing in brackets, then we do not yet know whether this is a typical or atypical cat.

For DLST:

- Lion (typical)
- Sokoke (atypical)

It is not recommended for DLST to have these breeds and types of cats: Scottish Fold, Scottish Straight, British Shorthair, Chartreux, Snowshoe cat, Manx Cat, Ocicat, Turkish Van, Singapura cat, Turkish Angora, Ocelot, Felis margarita, Oncilla, Burmese cat, Margay, Bicolor American Shorthair, Rusty-spotted cat, Cymric, Catopuma badia, Abyssinian, Tonkinese cat, Russian Blue, Katopuma, Catopuma temminckii, American Shorthair.

It is not recommended for DSCT to have these breeds and types of cats: Norwegian Forest Cat, Sphynx cat, American Curl, Savannah cat, Havana Brown, Lynx, Bobcat, Ragamuffin, Oriental Shorthair, Lykoi, Ragdoll, Lion, Tiger.

Attention! We have typologically matched you with the right cats for a comfortable relationship (Identical relationship). We do not guarantee that the cat on your list will not bite you or other family members and people. Especially since this list includes wild large predatory cats, which have always been and are predatory. Keep in mind that cats can also cause you to be allergic to their fur or possibly other illnesses. So if you have a personal intolerance, consult your doctor before having an animal. By the

way, you should not feel any compassion, fear or delight when you look at your cat. The only thing you should feel is a neutral respect. All information given here is only informative. We do not advice you or insist that all people should have a cat.

A cat, as any other animal, is not a toy!

You should not play with a pet negatively or beat it after you choose a cat. That is why we ask people, who do not like or do not respect animals, to refrain from having a pet. Believe us, there are people who love animals, who would love to choose cats and they may care for them properly. So, after reading this article you might have a clue on how to choose a cat only for yourself (not for your family members).
